DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, drawn to method of determining risk of cardiovascular disease by measuring apolipoprotein B (Apo B), classified in class 435, subclass 7.1, for example.
 - II. Claims 9-20, drawn to method of monitoring risk of cardiovascular disease by treatment and measurement of Apo B, classified in class 436, subclass 71, for example.
 - III. Claims 21-28, drawn to method of screening cardiovascular modulating substances by treatment and measurement of Apo B, classified in class 424, subclass 9.2, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions different modes of operation, different functions, and different effects in that Invention I requires measuring the level of Apo B to determine a risk of cardiovascular disease, Invention II requires treatment of a subject with Apo B reducing substance and measuring its effect on Apo B, and Invention III

requires screening a substance for its Apo B reducing effects by administration of the substance and correlation of the result to a baseline value.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, because the search required for Group I is not required for Group II, and the search for Group II is not required for Group III, restriction for examination purposes as indicated is proper. Literature search for each method is distinct since the structural requirements of each invention are different. While searches would be expected to overlap, there is no reason to expect the searches to be coextensive.

2. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gailene R. Gabel whose telephone number is (571) 272-0820. The examiner can normally be reached on Monday, Tuesday, and Thursday, 5:30 AM to 2:30 PM.
